Flutter Demo

By

2023TM93556@wilp.bits-pilani.ac.in

- Frontend built with Flutter, providing a native app experience across iOS and Android

- Backend is powered by Back4App, a Backend-as-a-Service (Baas) based on Parse Server

- Tools: Flutter; Parse SDK,Back4App (Parse Server), Android Studio, Dart

Authentication

- Users sign up and log in using BackAApp's built-in APIs, which handle authentication and session management

Database Structure:

- _User table stores : username, email, password

- userRecords table is used for additional use data (e.g., name, age)

Challenges Overcome

- Addressed proxy issue during development

- Debugging challenges by adding print statements
